What's in a tooth? Techniques for the bioarchaeological analysis of teeth

A Workshop by Dr. Tracy Prowse
Associate Professor of Anthropology
McMaster University

Upper jaw of ANC233, a 3- to 4-year-old child from Roman Britain. Large chunks of missing enamel are evident, particularly at the incisors and canines. (Photo credit: L. Bonsall)

Friday, 15 March 2019
3:00-5:00
Swallow Hall 210

Sponsored by the Ancient Studies Program and the Department of Anthropology
